

# [Pending Transfer] Why is my crypto transfer pending on Coinbase?

---

Coinbase pending crypto transfer typically means that the operation is not to be confirmed by the blockchain or is going through security measures 1-816-208-7304. When sending cryptocurrency Coinbase sends your transaction to the blockchain where miners or other validators verify the transaction 1-816-208-7304. When the network become overloaded like with Bitcoin or Ethereum coins +1 (816)(208)(7304), the transaction can take more time to confirm 1-816-208-7304. Delays also happen in cases where low network charges are charged; transactions that have greater charges are prioritized 1-816-208-7304. The other reason that might lead to future transfers is the security check at Coinbase which occurs when something suspicious is seen in your account like transaction of large sums +1 (816)(208)(7304), the use of a new gadget +1 (816)(208)(7304), or a new geographical location 1-816-208-7304. The transactions are not able to be rushed by being sped up by hand once it has been broadcasted in the blockchain 1-816-208-7304. In case your transfer is not broadcast yet +1 (816)(208)(7304), and still on the initiated state +1 (816)(208)(7304), then it can be postponed because of verification +1 (816)(208)(7304), or momentary blockage of the account 1-816-208-7304. You are supposed to look into your email and notification to see messages by Coinbase stating why there is delay 1-816-208-7304. The most pending transfers clear automatically when the network confirmation is done or security review is completed 1-816-208-7304. In case a transfer has not been completed in a long time +1 (816)(208)(7304), you may report to Coinbase support 1-816-208-7304.
